

SATYA RANJAN DAS

✉ dassatyanranjan424@gmail.com ☎ +91-7205663611 📍 Bhubaneswar, Odisha 🔗 [Linkedin](#) 🐙 [GitHub](#) 📁 [Portfolio](#)

SUMMARY:

Software Engineer with 1+ year of experience building scalable web applications and backend services. Strong foundation in Data Structures, Object-Oriented Programming, SQL, and RESTful API development. Experienced in designing responsive applications using JavaScript, React, Node.js, and PostgreSQL with a passion for solving complex engineering problems and building high-performance software systems.

EDUCATION:

- | | |
|--|--|
| Institute of Technical Education Research, SOA University
<i>B. TECH in Computer Science and Engineering</i> <ul style="list-style-type: none">• Mark Secured – 72.60% | 11/2020 – 07/2024 Bhubaneswar, India |
| Jupiter Science Higher Secondary School, Class 12th CHSE Boards <ul style="list-style-type: none">• Mark Secured – 80.33% | 05/2018 – 08/2020 Bhubaneswar, India |

PROFESSIONAL EXPERIENCE:

- | | |
|---|--|
| Kalpanaaa Software Solution Pvt. Ltd., Software Engineer <ul style="list-style-type: none">• Developed and enhanced scalable enterprise web applications by implementing reusable frontend components and integrating backend services to support business-critical application workflows.• Designed and consumed RESTful APIs, implementing request validation, authentication, exception handling, and structured API responses to improve application reliability and security.• Applied Object-Oriented Programming (OOP), data structures, algorithms, and software design principles to develop clean, maintainable, and efficient application components.• Worked with relational databases such as PostgreSQL, writing and optimizing SQL queries, managing application data, and improving database interaction and application performance.• Contributed to the development of scalable backend services and modular application components, following software engineering best practices and maintainable architecture principles.• Used Git for source-code management, branching, merging, and collaborative development, while participating in peer code reviews to maintain coding standards and quality.• Used Docker to containerize applications and establish consistent development and testing environments across the team.• Performed application and API debugging, troubleshooting, and performance optimization, identifying root causes of technical issues and implementing reliable fixes.• Collaborated with QA, product, and development teams in an Agile/Scrum environment to plan, develop, test, and deliver software features within project timelines.• Performed API and functional testing using Postman and contributed to improving application quality through validation, defect resolution, and regression testing.• Maintained technical documentation covering application functionality, APIs, development processes, and troubleshooting procedures to support team knowledge sharing.• Contributed to continuous improvement of development processes, application performance, reliability, security, and maintainability throughout the software development lifecycle. | 08/2026 – Present Bangalore, India |
| Appman Technologies Pvt. Ltd., Software Engineer <ul style="list-style-type: none">• Developed and maintained enterprise-level web applications using JavaScript/ES6+, React, HTML5, and CSS3, building responsive and reusable UI components with a focus on performance, usability, and cross-browser compatibility.• Designed and integrated RESTful APIs using Node.js and PostgreSQL, implementing secure authentication, data validation, error handling, and optimized database queries to improve application performance.• Applied object-oriented programming, data structures, algorithms, and software design principles to develop maintainable and scalable application components.• Worked in an Agile/Scrum development environment, collaborating with developers, QA, product stakeholders, and other cross-functional teams throughout the software development lifecycle.• Used Git for version control and collaborative development, participating in code reviews and following coding standards and best practices to maintain code quality.• Containerized applications and development environments using Docker, supporting consistent builds, testing, and deployment workflows.• Performed API testing and debugging using Postman, identified application issues, and implemented fixes to improve reliability and overall system performance.• Worked with relational databases (PostgreSQL), including schema design, SQL queries, data manipulation, and query optimization for application performance.• Contributed to application security, reliability, and performance improvements by implementing secure authentication mechanisms, validating API requests, and troubleshooting production and development issues. | 05/2025 – 07/2026 Bhubaneswar, India |

- Created and maintained **technical documentation** for APIs, application functionality, development processes, and troubleshooting procedures.

SKILLS:

Programming Languages — Java, JavaScript (ES6+), TypeScript, SQL

Computer Science Fundamentals — Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems, Computer Networks, Software Development Life Cycle (SDLC)

Backend Technologies — Node.js, Express.js, REST APIs, JWT Authentication, RBAC, Prisma ORM

Database — PostgreSQL, SQL Server, Redis (NoSQL/In-Memory), Neon

Frontend Technologies — React.js, HTML5, CSS3, Tailwind CSS, Redux Toolkit

DevOps & Tools — Git, GitHub, Docker, Postman, Azure DevOps

Cloud Platform — Azure

PROJECTS:

Learnova — Smart E-Learning Platform (LMS)

- Architected and deployed a production-ready full-stack e-learning platform using React, Node.js, Express.js, Prisma, and PGSQL, featuring role-based dashboards for students, instructors, and admins with secure JWT authentication and RBAC.
- Engineered scalable LMS functionalities including course creation and approval workflows, quizzes, assignments, coding challenges, live classes, progress tracking, certificates, and discussion systems with optimized REST API integration and responsive SaaS-style UI.
- Designed and integrated a PostgreSQL database on Neon DB with Prisma ORM, implementing protected routes, analytics dashboards, enrollment management, and real-time learning workflows to deliver a modern educational platform.

Bondly — Travel Discovery Platform

- Architected and deployed a scalable travel discovery platform using React and Node.js, enabling customizable itineraries, content sharing, and highly interactive user experiences across the platform.
- Built secure and scalable backend services with JWT authentication, Redis caching, and PostgreSQL database integration, reducing API response times by 60% and ensuring high-performance data handling.
- Engineered robust full-stack features including trip creation, photo uploads, comments, and reviews, driving an increase in user engagement and improving overall platform performance efficiency.

ACHIEVEMENTS:

- Completed the Web development course from Pre-Grad in Dec '22 - Mar '23 [Certificate] 
- Completing Bootcamp on Front-end web development from Dev-town in Jul '22 – Aug '22 [Certificate] 
- Attended the Competitive Coding Workshop conducted by Coding Ninja, Odisha, India, April 2021
- Worked as a Member at Robotics Club, ITER College, Siksha 'O' Anusandhan University, Odisha, India, Sep'20- Aug'22
